

Non-Ministry Funded Trainee Numbers Continue to Surge

The 2022-23 CAPER Census is now available on our website ([link](#)). The total number of post-M.D. trainees continues to increase year-over-year with that growth being almost exclusively of non-ministry funded trainees.

The orange line showing regular ministry funded trainees has been relatively static since 2019-20 and dropped slightly this year. In contrast, the total number of trainees continues to rise from 2020-21. The increase in non-ministry funded trainees was driven almost exclusively by fellows.
