

Trends in the Gender of First-Year Trainees in Canada Over the Last Twenty Years

Every year the seventeen medical faculties in Canada report on their post-M.D. trainees across the nation. CAPER has been collecting data since 1988 allowing us to look at historical trends across time. See below for the percentage of PGY-1 trainees by gender reported by the faculty across the last twenty years.

CAPER also collects information about which programs students are enrolled in when they start residency training. The following graph shows the percentage of female trainees across broad specialty training area.
